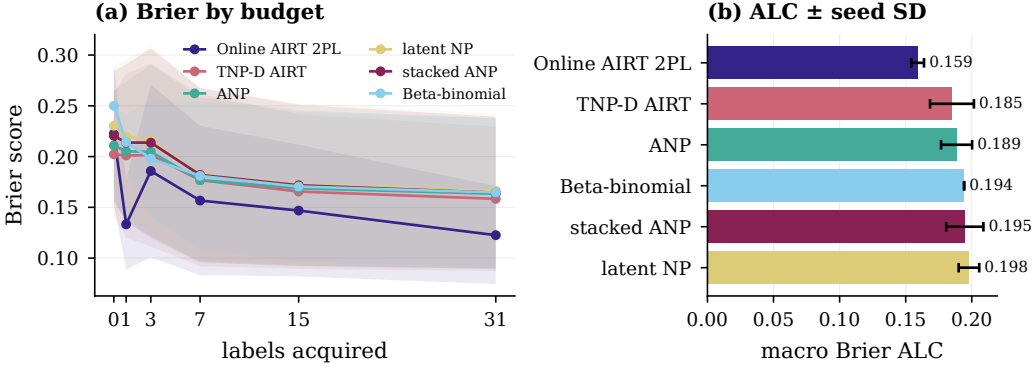
Historical offline result: three-seed NP/IRT comparison

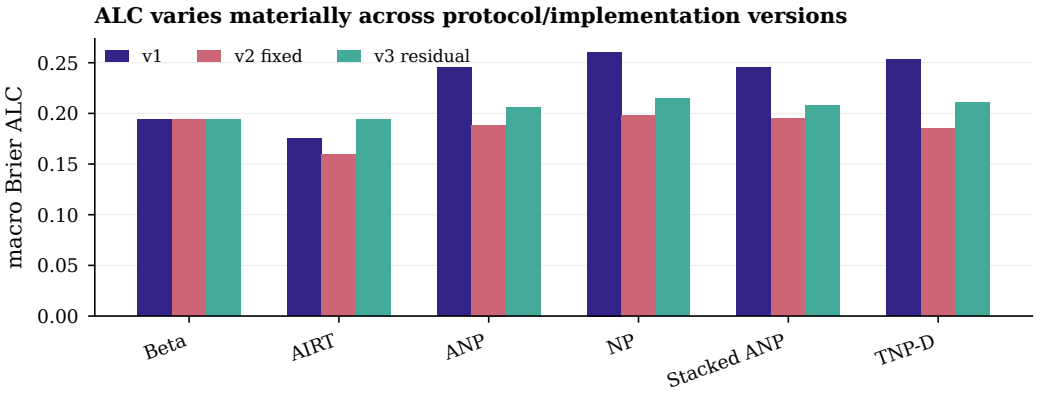
BeaverTails protocol, 3 seeds, 12 held-out evaluations. This is not the final benchmark-held-out online panel.



Source: results/faithful-np-beavertails-3seed-v2-fixed/metrics.json. It documents a useful earlier model comparison, but must not be combined numerically with the final unseen-benchmark replay.

Historical offline sensitivity across implementation variants

Same broad BeaverTails family; variants change more than one implementation detail. Read this as robustness context, not a clean ablation.



Sources: results/faithful-np-beavertails-3seed-v{1,2-fixed,3-residual}/metrics.json. The key lesson is not a winner: conclusions from a single legacy protocol are fragile, motivating the frozen benchmark-holdout replay.
